The red LED should be off.Power 25 mA Alarm 7.516 VDC 500 mA 30 VDC UL 8.914.5 VDC.If this equipment not expressly approved by Honeywell may cause harmful interference to false alarms for help. Changes or modifications to this equipment does cause harmful interference to radio or television reception.The following terms are frequently used to search for Honeywell DT7235 support. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. Please try again later. From the United StatesThe home was prewired for our alarm system when built, but it would have been very difficult to install a magnetic reed sensor on the window middle bay window. Therefore, since we already have two of these motion sensors in our home, I purchased this third sensor and wired into an unused zone in our Honeywell system.Please try again later. Please try again later. ARIS KRIMETZ 5.0 out of 5 stars Installation and wiring was straightforward, and the best part was no adjustments, plugandplay out of the box. I installed mine in the corners at 7 high, per the instructions, and I get great room coverage that

allows for larger up to 100 lbs pet immunity than some of the other sensors I looked at. <http://www.acaimacunaima.com.br/datamont/userfiles/daewoo-kalos-2004-manual.xml>

Please try again later. Please try again later. Twodogs 5.0 out of 5 stars Does have an angled back to facilitate either corner or flat wall mounting. Works. Please try again later. Please try again later. Byers 5.0 out of 5 stars I have in a barn where birds fly past and it doesnt set off. Wide range, catches me every time. Please try again later. Please try again later. Anthony Woicekowski 5.0 out of 5 stars Please try again later. Please try again later. James H Hudson Jr 4.0 out of 5 stars Designed to be screwed flat to a wall no angled mount for corner installation. Otherwise, it works great. Please try again later. Please try again later. Im slowly figuring out how to use the different components and get them hooked up to microcontrollers for my own silly experiments. Ive been playing with this motion sensor over the weekend and Im pretty perplexed which is admittedly easy with this stuff. Ive found marketing infos and datasheet as well as an installation guide but I dont know how to interpret them. I can power it and it seems to be working fine, since it has an indicator LED when it picks up motion, but I dont know how to get the trigger signal from it. The first thing I did was connect a multimeter to test the relay connections. I tried every combo of ground and power that I could think of, but when I connect ground to the power ground terminal and positive to either C or NC, I get varied voltages depending on the state. It seems that when its not detecting, those terminals output .6V, but when it does sense motion, they drop to .3.4V. That seems fairly straight forward, but I dont really know what to do with that information. When I connect to an analog input, I get readings all over the place from 0 to 0.99 but they dont sync with when the indicator light is showing it detected motion. So, I thought, maybe I misinterpreted and should use a digital input instead.

Well, thats just as random, bouncing from 0 to 1, seemingly with no relation to when its detecting motion. Im sure this is much simpler than Im making it, but Im lost. Can anyone give me any advice on how to use this sensor Thanks! Did you finde the solution Because im getting crazy! The tamper loop you can ignore these sensors are wired with a six core cable, if someone cuts the cable the cable haa been tampered with. And the tamper loop broken. The thing is connect it to the arduino. I have try to connect the NC directly to arduino and read the input pin, to see what happens when the sensor its activated, but nothing happens. Then a try to connect NC to C with a resistance and then to the arduino, but nothing. What im doing wrong. Ill try to post pictures of the systems. Many thanks!! I have two connections which are just labeled alarm and Im hoping that they do the same as C and NC in your case. Sorry if the answer is obvious, Im new to this and dont want to fry my arduino. Last Updated on 20080102 Always look for the Mark on the product. No adjustments are necessary. Installers simply mount the unit at the recommended height, conduct a brief walktest

and the sensor is ready. A singlecolored LED helps the installer easily identify range from any distance or angle within the pattern. KBand microwave technology delivers sharp detection without holes or weak spots. The custommade source offers pattern shaping to fill the protected area with a broad, balloonshaped pattern which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls. The DT7235T protects against false alarms caused by RF signals, electrostatic discharge, and electrical overstress. The patented black bug guard improves white light immunity and the patented adaptive microwave threshold circuit automatically adjusts for room disturbances. The sleek, sturdy housing fits into a variety of building styles and blends with any room decor. ABS plastic is used for shock and impact protection. The housing offers a convenient wiring channel, knockouts for mounting and wiring, and easy access to wiring terminals. The customdesigned Fresnel lens provides the same sensitivity for human targets at the edge of the pattern as it does for those directly in front of the sensor. Using a patented microwave adaption circuit, the DT7235T automatically adjusts its thresholds to account for room disturbances, such as ceiling fans and other repetitive moving objects, which are not an intrusion event. This helps reduce false alarm problems caused by lights, flashlights or reflective objects. Independent circuitry supervises the microwave against failure. Temperature compensation adjusts processing for improved detection and false alarm immunity.

Features Reliable Detection with 100 lb. Independent circuitry honeywell dt 7225 manual supervises the microwave against failure. A patented black bug guard honeywell dt 7225 manual reduces false alarms by providing 6, lux of white light immunity.
